

# Free Remote Viewing - Anywhere, Anytime Access

## See what you have been missing!™

Using the Command Center Software and your Online Services account, you can monitor live video from your cameras from anywhere in the world, at no additional cost, using a Windows® Media enabled Internet browser or Cell phone.

You can remotely monitor multiple-sites from a single account.\* Monitor each site in any of the following modes:

- Single camera view to watch one area
- Cycle view to rotate through all cameras
- Multiple view to see all cameras at once

## Use Free Remote Viewing

When you enable free Remote Viewing, your Command Center Software becomes a video server, ready to publish video through the secure Online Services network over the Internet to you, wherever you are. Logitech WiLife intelligently creates the most efficient path through your local routers to your remote device. You connect to your video feed by going to [online.wilife.com](http://online.wilife.com) and logging into your account – using your email address and password. Once connected to your account, you select the site and cameras you want to monitor. Our Online Services server then routes a live video feed to your device.

## How to Set Up Remote Viewing

### **Creating your Online Services Account**

Click here to find out how to [setup remote viewing](#).

Every user of Remote Viewing creates an online account that we use to securely connect you to your cameras.
